Attachment 1

CORE-CT File Exchange Protocol

Updated: 12/17/15 – updated with new PSPRD and PSTPR links.

There are currently two methods for exchanging files with the State's
Core-CT system:

1. The carrier logs into the secure Core-CT Production Supplier Portal via https to
    download files. The URL is https://coreps.ct.gov/psp/PSPRD/signon.html

    -or-

2. The carrier logs into the state Secure File Transfer site. The URL is
    https://sfile.ct.gov/

    This method should be used for automated file exchanges. This can also be accessed via
    sftp as well. We can provide credentials or can support public key authentication.

Testing Requirements

At least one test cycle must be completed successfully prior to going live employing one of the
previously mentioned file transports.

The Core-CT Supplier Portal option uses a non-standard port (10400 for Production, 15000 for
Test) and that may require action by the carrier's Tech Support area to accomplish this. Vendors
must report in their response to this RFP whether they were able to successfully reach the portal
sign on page at: https://coreps.ct.gov/psp/PSPRD/signon.html or if they have confirmed their
ability to reach or connect to the Secure File Transfer site at: https://sfile.ct.gov

For testing purposes, the link to the TEST supplier portal is:

https://corepstpr.ct.gov/psp/PSTPR

Additional information for all parties that exchange data with State's Core-CT system is available
at: http://www.core-ct.state.ct.us/hrint/
